# Chapter 5: Consultation and Coordination

## Scoping

Notice of Intent Filed in the *Federal Register*

The formal scoping process was initiated on August 8, 2001 when the National Park Service published notice in the Federal Register (Volume 66, Number 153) its intent to prepare an environmental impact statement (EIS) for a revised Fire Management Plan for Whiskeytown National Recreation Area.

### Public Meeting

A public scoping meeting was held on August 23, 2001 in the town of Old Shasta, in the Shasta Elementary School Multipurpose room. The meeting was advertised in the local media and letters were sent to agencies, organizations and members of the public inviting them to participate in the scoping process. Twenty members of the public attended. The National Park Service presented information about Whiskeytown's current fire management program and outlined four draft alternatives developed to increase fuel reduction efforts in the park. The meeting included a question and answer period and time for public comments.

## Consultation with Federal Agencies and Sovereign Nations

### Consultation with American Indians

The Wintu are the federally recognized tribe with an interest in the land and resources now managed by the National Park Service at Whiskeytown National Recreation Area. A letter was sent to Barbara Murphy, tribal representative for the Redding Rancheria.

A meeting was held on August 27, 2001 with Wintu representatives Linda Malone and Carol Sinclair to discuss the current fire management program and proposed changes at Whiskeytown National Recreation Area. The protection of cultural resources is a primary concern for the tribe. Concern was also raised regarding the timing of prescribed burns to protect trees, and the associated impacts to air quality. Vandalism or damage to archeological sites during prescribed burns or other fuel reduction activities is also a concern. It was suggested that monitors from the tribe be present during these activities to prevent damage and promote learning.

### U.S. Fish and Wildlife Service (USFWS)

The USFWS participated in the interdisciplinary team that developed the draft EIS and provided consultation related to wildlife issues and federally listed threatened and endangered species.

## Summary of Major Issues Raised During Consultation and Coordination

Issues are the concerns raised by park staff, other government agencies, and the public that were used to develop and evaluate the alternatives in this document. Concerns ranged from the impacts of wildland fire to the impacts associated with management actions taken to manage fire and reduce fuels. Planning issues discussed in this draft document include impacts to the biological environment (vegetation, wildlife), the physical environment (soils, geologic resources, water quality, wetlands/floodplains, and air quality), the cultural environment (cultural resources, sacred sites), and the social environment (health and safety, community economics, recreation, and visual resources). Impacts resulting from fire and fire management activities were analyzed for the following issues:

- Threats to human health, safety and property
- Alteration of historic fire regimes
- The unnatural accumulation of forest fuels resulting from fire suppression
- Smoke management/ impacts to air quality
- Accelerated erosion
- Soil compaction resulting from heavy foot traffic or equipment
- Impacts to water quality
- Changes in nutrient cycling
- Increased exotic species resulting from vegetation and ground disturbance
- Degradation of pre- historic and historic cultural resources
- Role of fire in managing resource procurement sites for Native Americans
- Impacts to old growth forest
- Impacts to sensitive, and federally listed threatened and endangered species
- Impacts to wildlife
- Impacts to vegetation

### **Public Meeting for Whiskeytown's New Fire Management Plan Announced**

Whiskeytown National Recreation Area is holding a public meeting on Thursday, August 23<sup>rd</sup> from 6:30pm to 8:00pm at Shasta Union Elementary School to discuss revision of the park's Fire Management Plan. Park staff would provide information on Whiskeytown's current fire management activities and would discuss proposed changes to the park's Fire Management Plan. An Environmental Impact Statement (EIS) is being prepared as part of the plan revision process in accordance with the National Environmental Policy Act (NEPA) and National Park Service regulations. This meeting is part of a formal public scoping period that ends September 15, 2001. An additional public comment period would be announced later this year when the park releases a Draft of the Environmental Impact Statement (DEIS).

The National Park Service has developed several alternative approaches to meeting fire management goals at Whiskeytown. These alternatives would be presented at the public meeting in Old Shasta, and would be documented and analyzed in the DEIS. The public is strongly encouraged to comment on the various alternatives, and to share concerns or suggestions regarding fire management at Whiskeytown at this meeting.

"Whiskeytown has taken an active approach to managing fire during the last ten years," stated park superintendent Jim Milestone. "However, we have found that decades of fire suppression have led to the unnatural accumulation of flammable vegetation in the park. This increases the likelihood of a high severity wildland fire burning at Whiskeytown that could place the public, our firefighters, and the park at greater risk. We need to incorporate new strategies into our current fire program to better care for the land we manage while enhancing public and firefighter safety."

Some of the changes proposed in the new Fire Management Plan include the use of mechanical brush removal and small-scale logging to reduce hazardous fuels in specific portions of the park. Whiskeytown is also considering managing some lightning-ignited fires as prescribed burns in selected portions of the park. "I hope all who are interested in Whiskeytown's Fire Management Program would join us for an open discussion of issues related to the alternatives being considered," stated Superintendent Jim Milestone. Contact the park with questions at (530) 242-3400 or (530) 242-3453. You may also reach us via the internet at <http://www.nps.gov/whis/>.

## United States Department of the Interior

Dear Citizen,

Whiskeytown National Recreation Area is holding a public meeting on Thursday, August 23<sup>rd</sup> from 6:30pm to 8:00pm at Shasta Union Elementary School to discuss revision of the park's Fire Management Plan. Park staff would provide information on Whiskeytown's current fire management activities and would discuss proposed changes to the park's Fire Management Plan. An Environmental Impact Statement (EIS) is being prepared as part of the plan revision process in accordance with the National Environmental Policy Act (NEPA) and National Park Service regulations. This meeting is part of a formal public scoping period that ends September 15, 2001. An additional public comment period would be announced later this year when the park releases a Draft of the Environmental Impact Statement (DEIS).

The National Park Service has developed several alternative approaches to meeting fire management goals at Whiskeytown. These alternatives would be presented at the public meeting in Old Shasta, and would be documented and analyzed in the DEIS. The public is strongly encouraged to comment on the various alternatives, and to share concerns or suggestions regarding fire management at Whiskeytown at this meeting.

Whiskeytown has taken an active approach to managing fire during the last ten years. However, decades of fire suppression have led to the unnatural accumulation of flammable vegetation in the park. This increases the likelihood of a high severity wildland fire burning at Whiskeytown that could place the public, our firefighters, and the park at greater risk. We need to incorporate new strategies into our current fire program to better care for the land we manage while enhancing public and firefighter safety.

Some of the changes proposed in the new Fire Management Plan include moving the Fire Cache and Whiskeytown's fire management staff to Oak Bottom. This would consolidate Whiskeytown's fire management resources at a central location. This move would also allow the park's administrative complex to be rebuilt to meet current and projected park management needs. Other proposed activities being considered for the revised Fire Management Plan include mechanical brush removal and small-scale logging to reduce hazardous fuels in

specific portions of the park. Whiskeytown is also considering managing some lightning-ignited fires as prescribed burns in selected areas of the park. I hope you would join us for an open discussion of issues related to the alternatives being considered. Please feel free to contact Teri Tucker, the Fire Management Plan EIS coordinator at (530) 242-3453 or via email at [teri\\_tucker@nps.gov](mailto:teri_tucker@nps.gov). You may also reach us via the internet at <http://www.nps.gov/whis/> or by calling the park's general information line at (530) 242-3400.

Sincerely,

Jim F. Milestone  
Superintendent

Redding Rancheria  
C/O Barbara Murphy  
2000 Rancheria Road

### **Dear Redding Rancheria**

Whiskeytown National Recreation Area is revising the park's Fire Management Plan. An Environmental Impact Statement (EIS) is being prepared as part of the plan revision process in accordance with the National Environmental Policy Act (NEPA) and National Park Service regulations. During recent meetings with members of the Wintu community conducted for the preparation of the "Ethnographic Overview and Traditional use Study of American Indian Affiliations Within the Whiskeytown National Recreation Area, California", an interest in fire management was expressed by those present.

As the Federally recognized tribal representative of the Wintu community, we would like to invite you to meet with us separately from the public meeting to be held on Thursday, August 23rd. We are also sending letters to those who are on our Ethnographic Overview mailing list (the Rancheria is also included on that list), inviting them to the public meeting. Of course, you are invited to that meeting as well.

If a separate meeting is agreeable to you, we would like to propose a meeting with you on Monday or Tuesday, August 20th or 21st, with a time and location suitable to you. If this is not convenient, we would be happy to schedule any other time that would be convenient before the scoping period ends on September 6. We would like to discuss our thinking about the current Fire Management Program and proposed revisions to develop a new Fire Management Plan, and any thoughts or concerns that you may have.

We look forward to meeting with you. Please contact me at 530-242-3460 to schedule a meeting and discuss any questions you may have.

Sincerely,

Jim F. Milestone

Mr. James G. Smith  
U.S. Fish and Wildlife Service  
Northern Central Valley Fish and Wildlife Office  
10950 Tyler Rd.  
Red Bluff, CA 96080

Dear Mr. Smith:

The National Park Service, Whiskeytown NRA, is requesting consultation under Section 7 of the Endangered Species Act from USFWS on two pending projects.

The NEED Camp Bridge Replacement Project entails demolition of the existing bridge located on Clear Creek, 2 miles downstream of Whiskeytown Dam, and construction of a replacement. The present single lane bridge is structurally deficient and the bridge approaches have washed out several times during high flow events. The elevation of the proposed new bridge would be raised substantially to provide unimpeded flows during a 100 year flood. Listed species potentially affected by construction activities include spring-run chinook salmon and steelhead trout.

The NPS is also requesting input and consultation on the planning process for our new Fire Management Plan (FMP) and FMP Environmental Impact Statement (EIS). The NPS is proposing the use of prescribed fire, several levels of mechanical treatment, and wildland fire use to accomplish resource management objectives such as hazardous fuel reduction and returning fire to fire-dependent ecosystems. Activities proposed under the preferred alternative of the EIS have the potential to impact listed fish and wildlife species within the park. Todd Chaudhry of your staff has accepted an invitation to attend our bi-weekly FMP EIS meetings to aid us in identifying potential impacts to listed wildlife species. Listed wildlife species potentially impacted by the aforementioned activities include the bald eagle and northern spotted owl. The NPS is also requesting input and consultation during our planning process from a fisheries biologist from your office. Listed fish species potentially impacted include spring-run chinook salmon and steelhead trout.

If you have any questions, please feel free to call me at (530) 242-3460.

Sincerely,

James F. Milestone  
Superintendent
